

Llwyn-derw: New Woodland Creation Project

Landscape Visualisation proposal based on photo montage: March '23

Following the completion of site surveys and consultation period the outline woodland planting design plan has been prepared and supported with Landscape Visualisation computer programme to assist with the interpretation of the woodland as it develops in the local landscape.

Photographs have been taken from five locations, as identified on the map below, and a photomontage created at each location to offer an indication of a future landscape.
